

High Pressure Hot Washing

MPW provides high pressure hot water for a superior clean, removing grease, tar, oil, dirt, glue and stubborn stains from equipment, floors and building exteriors. Our trucks offer a 2,000 gallon, self-contained water supply. The water is pressurized and heated to 180° F by a 1.5 million BTU kerosene heater. Two and four-gun capacity trucks deliver more cleaning power in a shorter period of time.

Customers request Pressure Washing in Parking Garages to remove salt, brine, unsightly mold, gum, transmission fluid, oils and chipped paint. The application of pressurized water and a biodegradable, environmentally-friendly soap quickly washes away debris on all parking facility surfaces.

If left untouched, garages can demand costly repairs or restoration. With MPW's experience, we provide a safer, cost-effective method to cleaning equipment, floors and building exteriors.

Contact your local MPW Representative today for more information on the many uses of Pressure Washing.

Mobile High-Pressure Hot Wash Trucks can be mobilized 24 hours a day, 7 days a week. Detergent or low pH chemicals can be injected through the pump system for deep cleaning.
