

Cable Tray Cleaning

Eliminates combustible dust by mixing medium air pressure with high vacuum pressure in nozzle inlet.

Dust and debris are removed from between cables through the nozzle outlet, ensuring elimination of airborne dust.

Procedure is safe for use on live wires.

FEATURES

- High-pressure vacuuming
- Fully grounded operation for live-wire work
- Single-vacuum nozzle that loosens and removes dust
- Adjustable air and vacuum pressure
- 12 nozzle configurations and lengths
- Safe removal of all dust including aluminum, bronze, magnesium, zinc, coal and sulphur
- Agricultural applications

BENEFITS

- Eliminates risk of igniting combustible materials
- Live-wire cleaning eliminates shutdowns
- Non-destructive cleaning of vital wiring
- Ability to clean hard-to-reach trays
- Eliminates airborne dust during cleaning process
- Increases efficiency and decreases downtime
