

Dredging & Dewatering

Manned, remote-operated dredges and pumps to execute any pit or pond project, including ash pond remediation.

Effective, efficient recovery of sludge from nearly any tank, pond or container.

Experts in engineering, industrial cleaning, water purification and environmental services custom design each solution.

FEATURES

- Pre-deployment testing and evaluation of client needs, including sonar mapping
- Large supply of dredging equipment includes:
 - Floating, diesel-powered dredge platform
 - Remote-controlled dredge
 - Submersible pumps in varying sizes and capacities
 - Augers to loosen sludge and debris
 - Cable guides to navigate dredging process
 - Bumpers and liner guards increase safety
- Additional pond-cleaning services are available
- Multiple dewatering techniques are available, including geobags, filter presses and clarifiers

BENEFITS

- Experienced team ensures adherence to OSHA and site-specific safety regulations
- Remote-operated equipment removes personnel from harm's way
- Experience with coal-combustion residuals (CCRs)/ash pond remediation processes to meet EPA regulations
- Reduction of downtime by keeping pond online during dredging operation
