

UHP Cutting

Effective when traditional jetting or cutting techniques are not adequate.

System can be employed where hot work cannot be attempted due to environmental or facility regulations.

Capable of up to 40,000 psi across multiple industries, applications.

FEATURES

- Automated systems remove operator from blast area
- Ultra-high pressures up to 40,000 psi
- Magnetic track system with multiple configurations
- Precision cuts on up to 6-inch steel reuse of removed cutout
- No heat is generated during the cutting process which eliminates metallurgical or environmental damage
- Adjustable-speed cutting

BENEFITS

- Environmentally safe cutting abrasive
- Only cuts targeted material
- Used water can be recycled
- Eliminates potential ignition of flammable materials
- No additional start hole required
- Reduces airborne contaminants
- Removes technician from blast area
