

Air Knifing Excavation

An environmentally safe digging technique.

Safe for critical underground utilities and structures.

Operates without the need for water.

FEATURES

- Nondestructive soil and debris removal
- More accurate and efficient excavation
- Operable from up to 200 feet away
- Debris removal, trenching, remote digging and potholing
- Rear-mounted vacuum canister for easy collection and backfill
- Remote-controlled vacuuming function

BENEFITS

- Excavations can be performed on frozen ground without freezing issues
- Eliminates waste generation and back filling, as spoils can be reused on site
- Excavation area remains dry for immediate access after completion
- Separates dry and wet spoils
- Nonconductive excavation eliminates potential for damage or injury during utility digs
