

With more than 45 years of industrial cleaning experience, MPW provides cutting-edge equipment and trained personnel to meet all your automated water blasting needs.

Description and Use

MPW's Automated Mini Excavator Shotgun offers an automated solution for water blasting and surface preparation. The system features a remote operated control box that allows an operator to position and engage the water blast controls.

This mobile system combines a rotary shotgun arm and a mini excavator base for easy mobility to provide a safe and innovative alternative to manual shotgun cleaning. The rubberized track system can position inward, allowing the mini excavator to travel through man doors. The automated controls allow operators to work longer without fatigue from outside the blast area.

The MPW engineering team can easily customize the automated shotgun to meet a wide array of applications including surface prep and bundle exterior cleaning.

Features

- Pressures up to 20k psi
- Operable with up to 300 horsepower pump
- Cleaning radius of 360 degrees
- Vertical reach up to 9.5 feet
- Horizontal reach up to 10 feet
- Remote controls for high-pressure water
- Onboard camera and light system

Benefits

- Decreases safety-related incidents
- Removes operator from blast area
- Wider cleaning radius and reach
- Increases productivity
- Decreases operating cost
