

# Microjet

**Hands-free solution for navigating pipes with 90 degree bends.**

---

**Automated rotary hose system.**

---

**Designed to clean nonlinear process piping 2 to 4 inches in diameter and up to 75 feet in length.**

---

**Provides thorough cleans in pipes with up to eight bends.**

---

## FEATURES

- Spinning drum rotates hose, providing added dexterity while also keeping hose neatly contained and protected.
- A self-rotary nozzle works in conjunction with the drum, producing a compound rotation that passes tight bends without compromising cleaning quality.
- A hose feed tractor powers the drum, moving the hose at variable speeds up to 32 inches per second.
- Wheel-mounted unit delivers convenient movability.
- Quick-release pins provide easy disassembly into modular components.
- Hose rotation, feed direction and forward/reverse feed rates are all independently adjustable.

## BENEFITS

- Meets industry requirements for single man lift and manway access.
- Removeable tractor can be separated from unit and used for non-rotation pipe cleaning.
