

Hydro Excavation

Safe alternative to conventional digging methods such as skid steers, backhoes, bulldozers.

Damage to critical underground utilities is minimized by using pressurized water (2,000 to 3,500 psi), high-power vacuuming.

Excavation projects completed in less time compared to conventional digging methods.

FEATURES

- Nondestructive soil and debris removal
- Hot water capability to easily excavate frozen ground
- More accurate and efficient excavation
- Debris removal, trenching, remote digging and potholing
- 1,000-gallon water tank with up to 18 gpm flow
- Remote-controlled vacuuming function
- Integrated fall-protection harness

BENEFITS

- Decreases safety-related incidents
- Reaches locations where traditional excavation may not be possible or ideal
- Built-in fall-protection safety features keeps operator safe
- Increases efficiency and decreases downtime
- Surrounding area and soil remains undamaged
