

Defect Analysis

Provides the expertise and equipment to establish a full, shop-wide defect identification library.

Inspects parts using lab equipment to identify particulate sources and deliver a list of problems and/or solutions.

Comprehensive cleaning and management of paint booth systems.

FEATURES

- Utilize lab-quality equipment to classify defects
- Catalog past defect samples into library for long-term referencing
- Apply expertise regarding paint systems to identify areas of improvement
- Initial walk-through to determine potential issues and improvement ideas

APPLICATIONS

- Optimization of entire paint line system from fresh-air ASH/AMU through the exhaust plenum and stacks
- Decreased rework costs
- Increased pass rate for paint department
- Buffer for the assembly plant for future defects
