

Industrial Chemical Cleaning Services

Our chemical cleaning technicians employ the most advanced technologies to ensure safety, attain the highest levels of cleanliness and reduce overall cleaning times.

Proprietary, remotely controlled equipment apply chemical solutions, eliminate confined space entry and minimize hazard exposure.

Our dedicated chemical cleaning team will work with you to develop a customized solution to:

- Maximize efficiencies through eliminating major disassembly
- Remove foulants, deposits, scale and other contaminants that can reduce efficiencies, heat transfer and production capacity
- Establish safe and efficient methods to control costs
- Implement procedures to ensure minimized waste generation.

CHEMICAL CLEANING METHODS

- Cleaning and gas-freeing of process units for turnaround maintenance
- Removal of benzene and sludge from process equipment
- Cleaning for protection of sensitized stainless steel
- Acid cleaning
- Passivation
- One-step neutralization
- Waste transport & disposal

MOBILE CHEMICAL RECIRCULATION FLEET

- Single-pass heat exchanging units
- Full containment under material decks
- Draining to poly drums under decks
- Large weather tight control centers for operation
- Mission Magnum Ductile & SS pumps
- 4 x 3 x 13 Mechanical seal PTO driven pumps
- 750-gallon, carbon steel lined tanks & SS tanks

INDUSTRIES SERVED

- Automotive
- Food & Beverage
- Manufacturing
- Petrochemical/Refining
- Power Generation
- Pulp & Paper
- Steel
